

GPO LASER RANGEFINDER

Measure distances reliably day & night

Our GPO laser rangefinders combine high-quality observation optics with the latest laser technology, angle calculation and, depending on the model, sensors for temperature, air pressure, humidity and ambient light. All models are characterized by their particularly compact size, low weight, bright OLED displays and high-quality, ergonomic design.

The **RANGEGUIDE** family stands for binoculars with high optical performance (transmission, colour rendition, edge sharpness, field of view) and integrated laser for distances of up to 3200 m. Three models (x32, x40, x50), each with 8x and 10x magnification, cover practically every area of application.

The **RANGETRACKER** is for anyone looking for a particularly compact and powerful rangefinder to complement their existing binoculars.

- High-quality optics, compact & lightweight packaging
- Distance measurement up to 3200 m
- Extremely fast laser (4 measurements per second)
- Angle calculator, bright OLED display (dimnable)
- Magnesium housing (except range tracker)

THE ESSENCE IN FOCUS

GPO BINOCULARS & MONOS

Perfect companions for hunting, nature observation and traveling

All three GPO binocular lines, the spotting scopes and the monocular follow the same philosophy:

High-quality optics mounted in extremely compact, light-weight and waterproof magnesium housings paired with elegant design, optimum ergonomics and maximum robustness.

The **SD binoculars** and the **Mono** are the perfect companion when traveling and in nature, when minimum weight and maximum compactness are required.

The **ED binoculars** offer wide fields of view with high edge sharpness, the best color rendition without color fringing and a particularly elegant design in 5 colors.

The **HD binoculars** feature uncompromising top-quality optics that are particularly robust thanks to their solid rubber armoring.

The new **APO spotting scopes** offer a large field of view, a robust design and enable unique observation experiences with maximum resolution and contrast, even in difficult lighting conditions.

- Wide and sharp-edged fields of view
- Color rendition without color fringing
- High transmission, resolution and contrast
- Particularly light & robust due to magnesium housing
- Tripod adapter thread on all models

GPO HUNTING SCOPES

Uncompromising specialists & all-rounders for every hunting challenge

All GPO riflescopes in the **SPECTRA** and **PASSION** line follow the same standard: uncompromisingly high quality optics with reticles in the 2nd focal plane tailored to all hunting requirements and challenges: Wide eye relief & fields of view, large exit pupils, HD lens systems (for best transmission, resolution and contrast), infinitely adjustable illumination control & G4i fiber optic reticle Made in Germany, parallax adjustment from 10 m, tool-free zeroing and a removable throw lever are just a few examples.

There are also absolutely no compromises when it comes to mechanical precision, repeat accuracy and shooting stability.

Despite their lightweight construction, all tube bodies are characterized by particularly high stability.

Reticle: G4i Fiber

- Best optical systems (field of view, transmission, resolution)
- High-quality mechanics (precise, shock-resistant, repeated accuracy)
- Electronics Made in Germany (iControl™ automatic switch-off, **NEW** with position & angle sensors)
- Particularly stable lightweight construction
- Various fiber and glass reticles in the 2nd focal plane
- High-quality and ergonomic design
- **NEW: Selected models now also available with rail mount and the GBT ballistic turret (see price list)**

GPO RIFLESCOPES FOR SPORTS SHOOTING & LAW ENFORCEMENT

Absolute reliability & precision at all distances

These GPO riflescopes of the **GPO TAC** and **SPECTRA** line are characterized by Mil-Spec based reticles in the 1st focal plane. In addition to high-quality optical systems, the riflescopes include sporting or tactical ballistic turrets with particularly wide adjustment ranges.

The **red dot** sights with their 3 MOA dot are absolute specialists for AR systems and handguns and offer many unique features in this price range.

The **GPO TAC Spotter** and the **Mono** follow the GPO design philosophy with their robust magnesium

housing and include a particularly high-quality optical system, both with Mil-Spec based reticle in the 1st focal plane. In particular, the PLR reticle in the spotter is identical to the PLRi reticle in the riflescope - the perfect combination.

- Best optical systems (field of view, transmission, resolution)
- High-quality mechanics (precise, shock-resistant, repeated accuracy)
- Electronics made in Germany
- Mil-Spec based reticle in the 1st focal plane
- Sporty & tactical adjustment turrets with Zerostop
- Wide adjustment ranges by 34 mm main tube
